KANSAS

FENTANYL AWARENESS

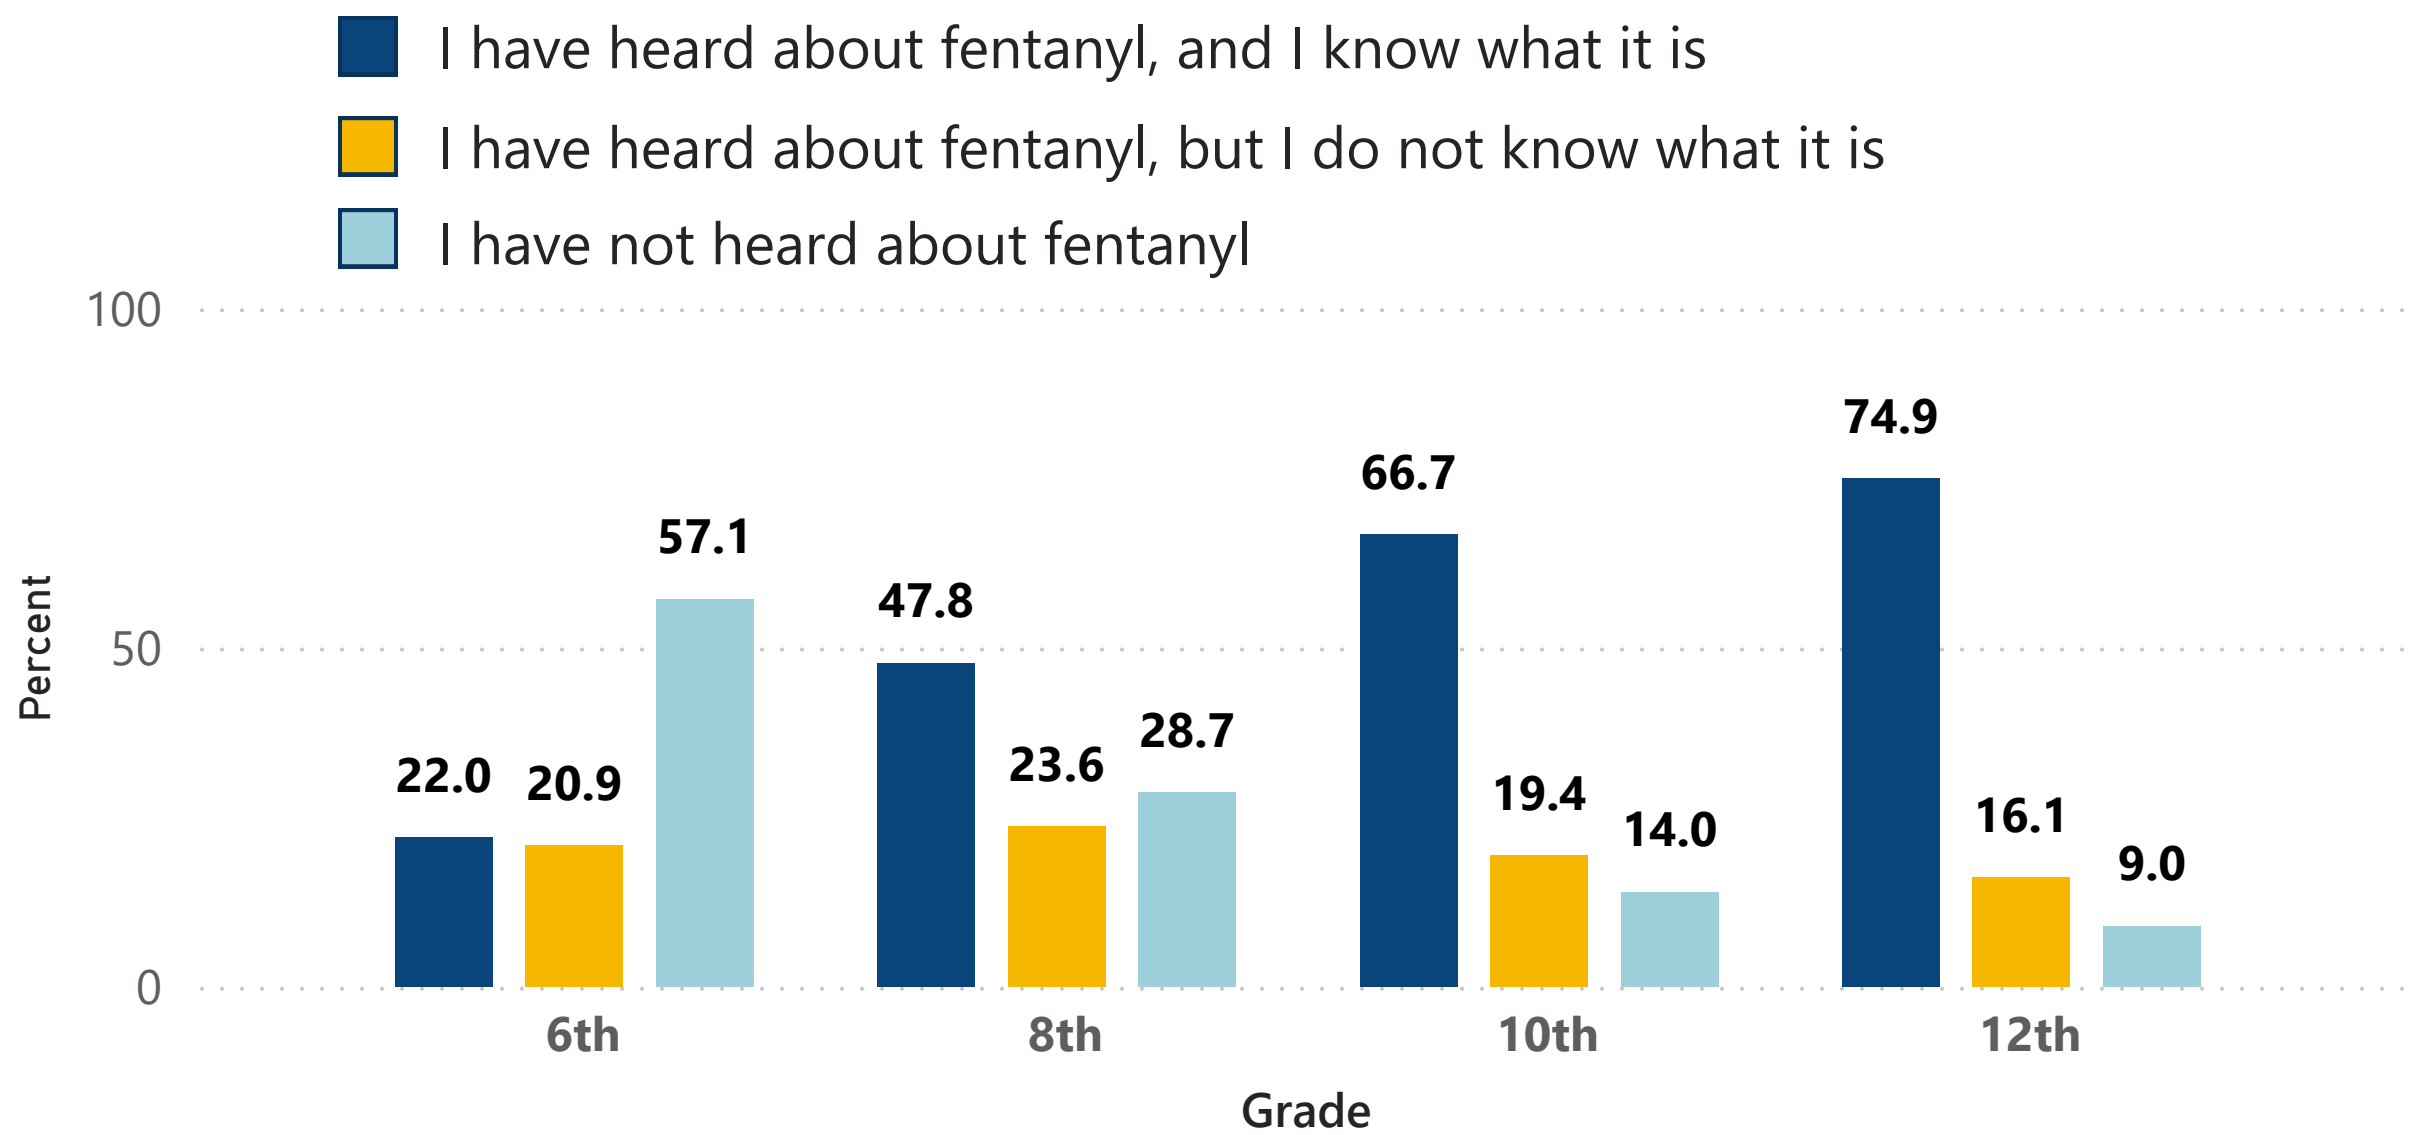

Percentage of students responding to the question
"How much have you heard about fentanyl?"

2024

Compare how 6th, 8th, 10th, and 12th grade students surveyed
in your community responded with students surveyed across the state

Compare how students surveyed in your community responded by grade level

Data for groups with fewer than 20 KCTC Student Survey respondents is not displayed.

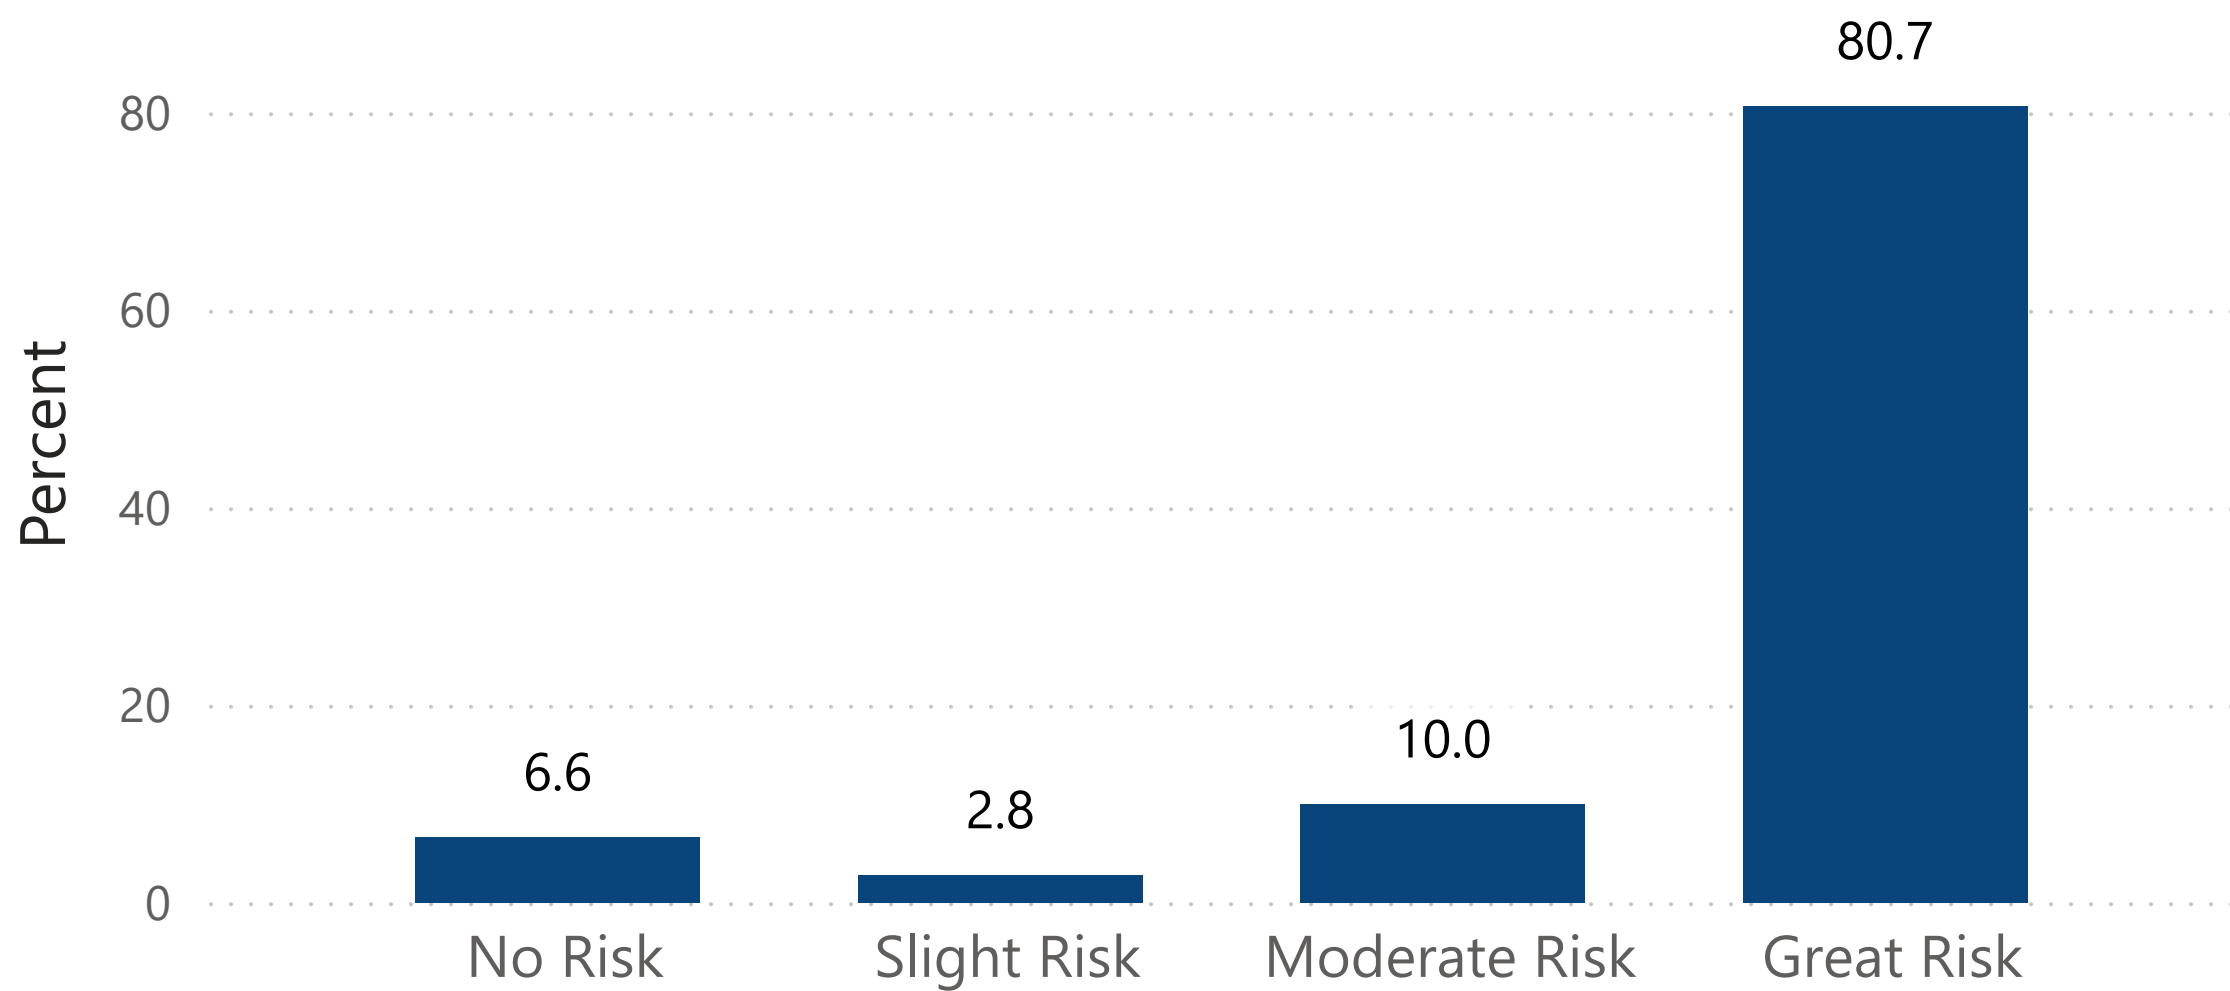

KANSAS

FENTANYL RISK OF HARM

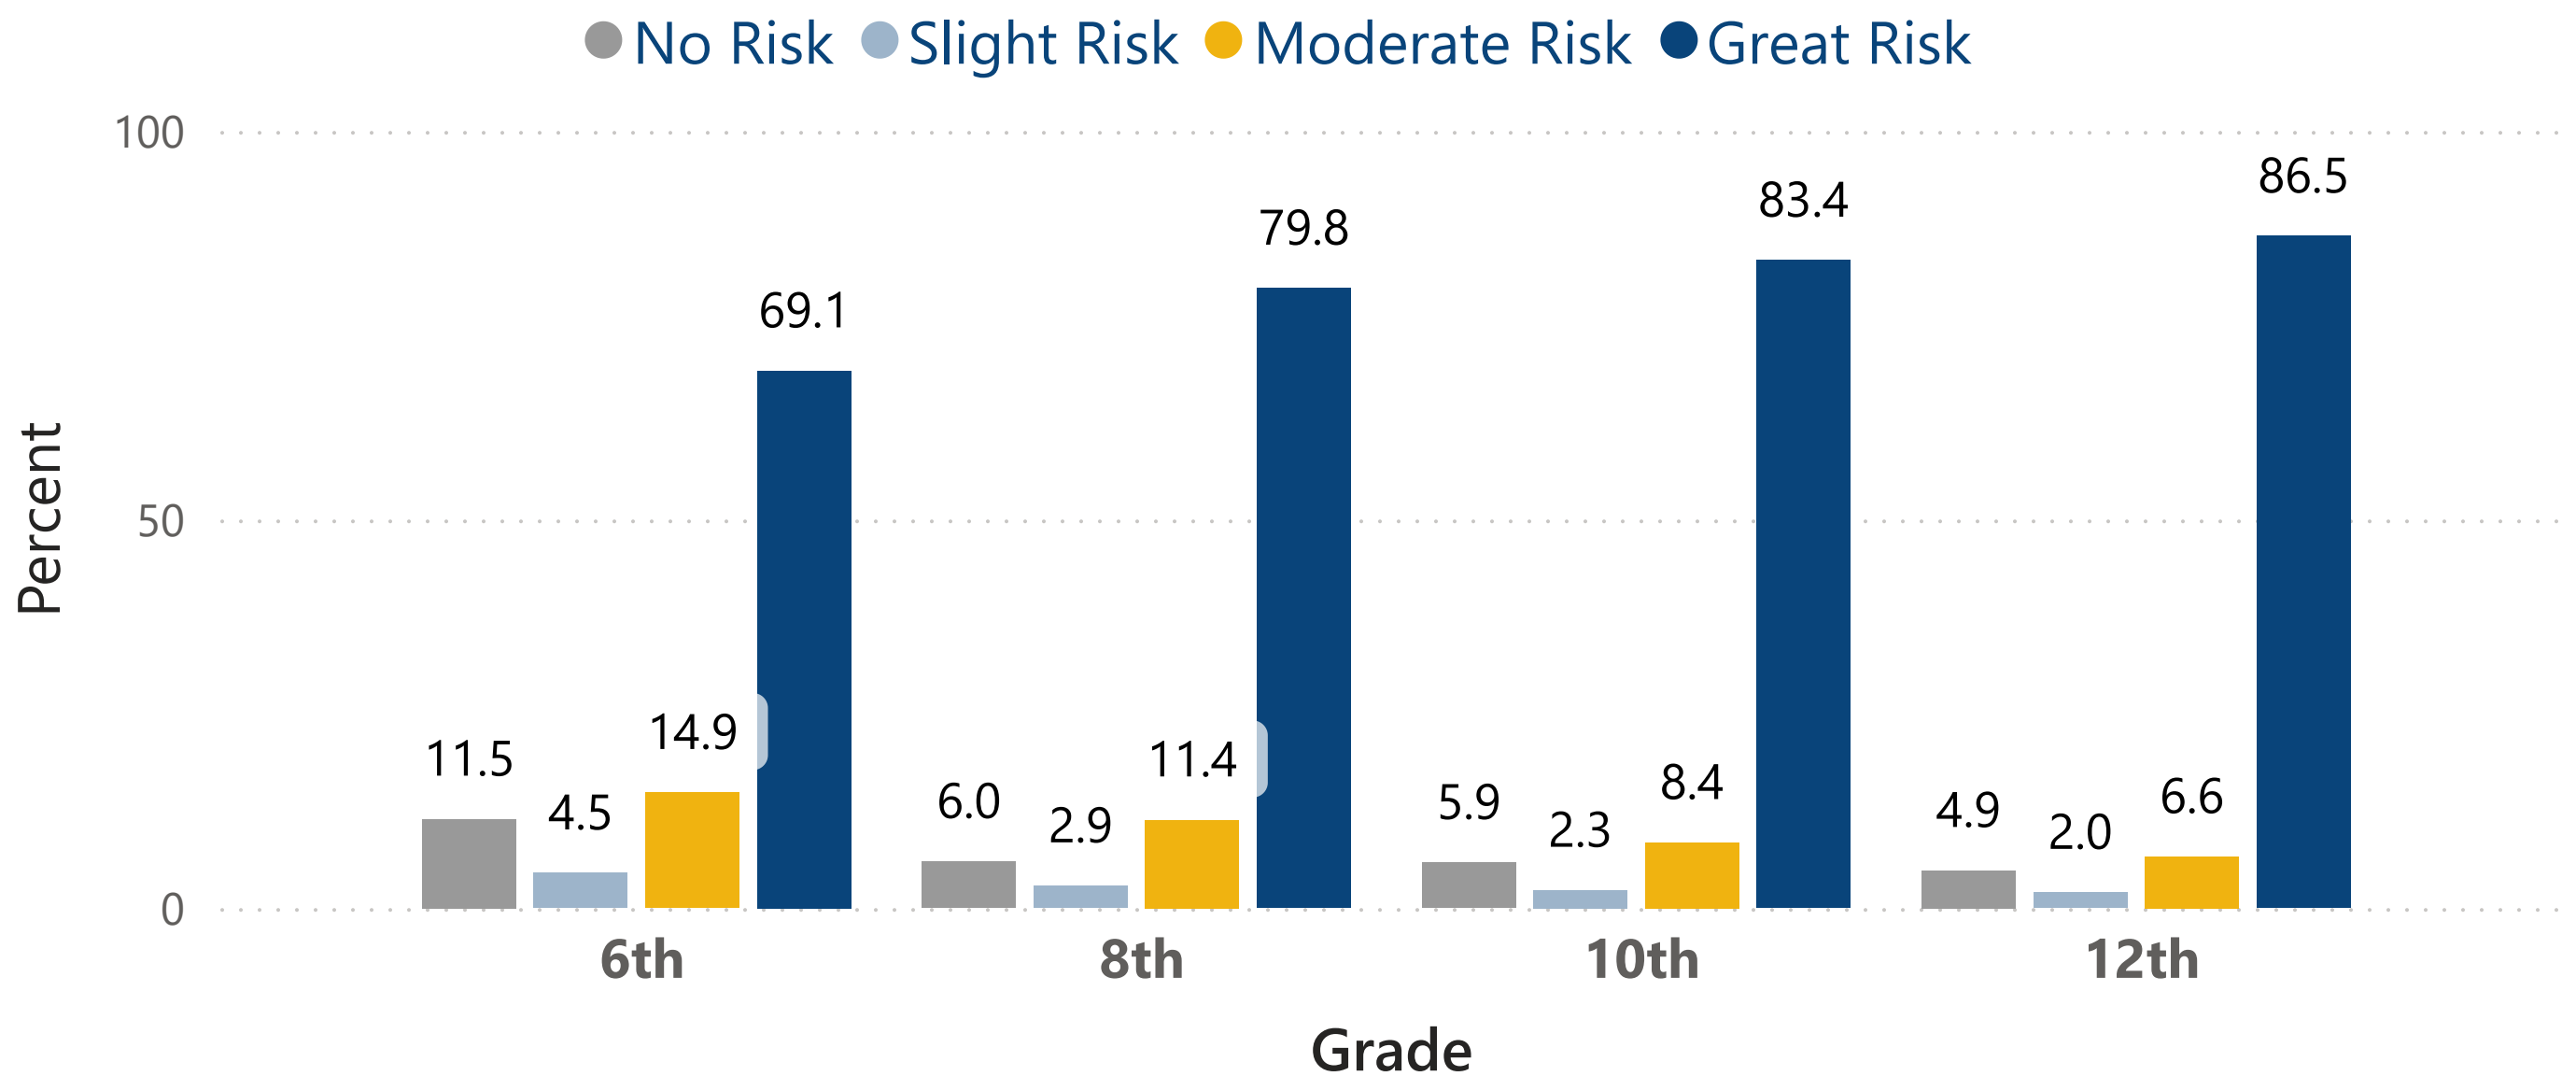

Percentage of students responding to the question
"How much do you think people risk harming themselves (physically or in other ways)
if they take fentanyl accidentally or on purpose?"

2024

Compare how 6th, 8th, 10th, and 12th grade students surveyed
in your community responded with students surveyed across the state

Compare how students surveyed in your community responded by grade level

Data for groups with fewer than 20 KCTC Student Survey respondents is not displayed.

WHAT IS FENTANYL?

Fentanyl is a synthetic opioid that is at least

50x MORE POTENT THAN HEROIN

INTENTIONAL USE

- Fentanyl is prescribed by doctors for severe pain especially after surgery
- Some people use it to get high because of its potency
- Just a few grains of fentanyl can cause an overdose

UNINTENTIONAL USE

- Many people are exposed to fentanyl without knowing
- Illegal labs can make fentanyl very cheaply
- Drug dealers mix fentanyl with other drugs to boost their potency and make more money

Many fake pills are made to look like prescription opioids such as oxycodone (Oxycontin[®], Percocet[®]), hydrocodone (Vicodin[®]), and alprazolam (Xanax[®]); or stimulants like amphetamines (Adderall[®]).

For more information about fake pills, go to:
[DEA.gov/OnePill](https://www.dea.gov/OnePill)

7 OUT OF **10** FAKE PILLS
WITH FENTANYL HAVE ENOUGH
TO BE DEADLY

TALK TO YOUR KIDS

Explain what fentanyl is and why it is so dangerous. Kids who have heard about fentanyl and know what it is understand the great risk of harm this deadly drug poses. Knowing that ANY drugs not prescribed to you by a doctor could be mixed with fentanyl might save your child's life.

WHAT IS FENTANYL?

- Fentanyl is prescribed by doctors to treat severe pain -- especially after surgery. It is called a synthetic (artificial) opioid.
- Fentanyl can be made by illegal drug makers and costs less than other drugs to make.
- Drug dealers mix fentanyl in with other drugs to make them more potent, but they don't regulate the amount.
- A few grains of fentanyl is enough to cause an overdose and death.

The small amount of fentanyl shown inside the circle is enough to cause an overdose.
