

What's Happening in Kansas?

From 2017 to 2021 reported vaping by young adults in Kansas nearly doubled. The increase in vaping was more prominent in young adults who were not attending college.

Vape Usage Over Time

Why Does This Matter?

Using an e-cigarette is commonly called vaping. Most e-cigarettes (vapes) contain nicotine. Nicotine can harm the brain which keeps developing until about age 25.

The Centers for Disease Control and Prevention has connected e-cigarettes use with lung injuries and even death in some cases.

What Can We Do?

Keep talking to the young adults in your life who currently vape or use any type of e-cigarette! Of the young people we surveyed who use tobacco products, over 68% said they plan to eventually stop using for good.

percentage of young adults who vape plan on stopping for good.
